Habitat Restoration & Management Guidelines
Section 11, T44E, R25S, Lee County, Florida

Cypress Woods RV Resort Phase V

Lockett Road
Revised: June 9, 2009**A. FOX SQUIRREL HABITAT RESTORATION GUIDELINES**

1. **RESTORATION SITE DESCRIPTION:** The subject restoration site is a forty foot wide buffer area located in the northeastern portion of the development, extending for approximately 800 feet east to the pine flatwoods buffer adjacent to the powerline easement. The previously existing forested buffer was unintentionally cleared and will be restored to meet Lee County Code, Sec. 14-384: Restoration standards, and the Sec. 10-420 Plant materials standards. The plantings will be according to Lee County's Department of Community Development, Division of Environmental Sciences indigenous habitat restoration area planting guidelines.

2. **HABITAT RESTORATION EXECUTIVE SUMMARY:** To help restore the habitat, slash pines and scattered live oaks will be planted an average of 15' on center, with 75% of the trees being a minimum 10' tall with two-inch caliper at 12 inches above ground, and the remaining 25% a minimum 16' tall with a 3-4 inch caliper, to provide more diversity sizes. Trees will be planted in random order so as not to appear as growing in rows. Shrubs will be limited to scattered clusters of saw palmetto, wax myrtle, beautyberry, gallberry and muhly grass, planted around selected tree clusters. Shrubs and groundcover vegetation must be in minimum one-gallon container, and clustered at an average of three feet (3') on center, to mimic pine flatwoods savanna habitat.

Habitat Restoration & Management Guidelines
Section 11, T44E, R25S, Lee County, FloridaCypress Woods RV Resort Phase V - Luckett Road
Revised: June 9, 2009**RESTORATION AREA SITE PREPARATION, MAINTENANCE AND MONITORING
GUIDELINES:**

1. Restoration areas are to be graded to natural elevations of adjacent pine flatwoods uplands, and harrowed to remove all ruts from the planting areas.
2. Eradicate any torpedograss, primrose willow, or any other exotic or nuisance vegetation prior to replanting, with an approved systemic herbicide, and establish an annual eradication program to maintain the area free of exotic species, and the nuisance species to less than 2% coverage.
3. Replant restoration areas with plant species and quantities as designated in the plant list provided in the Habitat Restoration Plant List (approx. 31,200 sq. ft.).
 - One hundred ten (110) trees, with no more than 76% at least 10' tall, 2 inch caliper and the remaining trees >16' tall, with minimum 3 inch caliper, planted in clusters of 3-5, on average 15' centers.
 - Three thousand four hundred sixty six (3,466) 1 gallon containerized shrubs, cluster 3' o.c.
4. Maintain a semi-annual exotic plant control the first year, and an annual control thereafter, in perpetuity, to treat the exotic vegetation resprouting with an approved herbicide, and manually remove any seedlings. Conduct activities during the winter and spring dry season.
5. Signage shall be placed at each end of the indigenous preserve area to identify and protect the preserve during and after construction. The signs shall be no closer than ten feet from adjacent property lines; be limited to a maximum height of four feet and a maximum size of two square feet, stating: "Preserve Area" (in large letters), "Please do not cut or damage any plants unless authorization by permit, or obtained in writing by Lee County Community Development" (in small letters). See example attached with these guidelines.
6. Provide Lee County with an annual monitoring report, for 5 years, including plant survival data and qualitative narrative describing the vegetative changes within the mitigation area. Include the following:
 - a. Provide three fixed point photo station panoramic photograph analyses at selected locations.
 - c. Narrative report of exotics invasion and removal success.
 - d. Plant survival data and revegetation success data, including quantitative data, natural recruitment success, exotic invasion, general condition, and recommendations.
7. Mitigation success criteria are as follows:
 - a. The area is maintained free of exotic plants, as defined by the Florida Exotic Pest Plant Council, with no more than 2% coverage at any one time (including but not limited to melaleuca, Brazilian pepper, Australian pine, etc.), and the number of exotic plants eradicated each year has been greatly reduced.
 - b. All nuisance plant species (torpedograss, primrose willow, caesarweed, dog fennel, etc.) constitute no more than 5% of the total plant coverage.
 - c. There is an 80% survival rate of the planted vegetation and at least 80% coverage of the planted area by indigenous native vegetation at the end of the third year of monitoring.
 - d. There is a continual increase in indigenous plant species composition throughout the five year monitoring period.
